- https://github.com/BigDave07

PROFESSIONAL SUMMARY

Software Engineer building shipped products across **React Native**, **Next.js**, and **Supabase**. Delivered a consumer iOS app from empty repo to App Store launch, then built backend systems with LLM routing, caching, and safety controls. Comfortable owning product decisions, architecture, and deployment across the full stack.

WORK EXPERIENCE

FOUNDER May 2026 to Current
Pickup (AI Voice Intake Agent) and Synvora (skincare analysis app), Regina, SK

- Conduct **30+ customer discovery calls across Regina, Saskatoon, Winnipeg, Calgary, and Edmonton** to validate intake failures in local firms.
- Validate the problem with **two law firms**, confirming paid search leads were dropping before consultation booking.
- Build a working voice agent demo that qualifies inbound callers and books consultations into firm calendars on Vercel and Google Cloud telephony.
- Architect the missed-call recovery MVP on Twilio, the Claude API, Supabase, and a Next.js dashboard.
- Conduct direct outreach to target firms and handle technical pre-sales conversations with non-technical business owners.
- Position Pickup as a multi-tenant AI receptionist for law firms and local service businesses through trypickup.dev.

SOFTWARE ENGINEER INTERN Aug 2025 to Oct 2026
Farm Credit Canada (FCC), Regina

- Built backend features for internal tools using Python and TypeScript in a collaborative development environment.
- Developed REST API endpoints to support data exchange between internal systems and user-facing applications.
- Tested application changes and reported defects before release to improve stability and usability.
- Supported technical discovery by gathering requirements and clarifying feature scope with teammates.
- Implemented data queries and validation checks to improve reliability across internal reporting workflows.

AI SOFTWARE INTERN May 2024 to Sept 2024
Autodesk, Toronto, ON

- Developed retrieval-augmented generation flows to ground responses in relevant internal content.
- Built API integrations to connect model outputs with downstream product and workflow systems.
- Designed LLM evaluation sets to compare response quality across common user scenarios.
- Implemented agent orchestration patterns to coordinate tool use and structured response handling.
- Reviewed model failures and updated guardrails for safer, more consistent responses.
- Refined SQL queries to support data checks, analysis, and experiment review.

EDUCATION

University of Regina, Regina, SK
Bachelor of Science, Software Engineering, Expected in Dec 2026
Relevant coursework: Data Structures, Algorithms, Software Engineering, Machine Learning, Embedded Systems (Arduino)

SKILLS

Technical Skills: Python, TypeScript, SQL, FastAPI, React Native (Expo, Expo Router), Testing strategy

AI Systems & Automation: Agent orchestration, Retrieval-augmented generation, LLM evaluation, Vision-language models, Model routing

Product Delivery & Operations: System design & architecture, API integration, Authentication & authorization, Multi-tenant architecture, Technical discovery

CERTIFICATIONS

- IBM Machine Learning Professional Certificate
- IBM Python for Data Science
- IBM RAG and Agentic AI Professional Certificate

SELECTED PROJECTS

Synvora — iOS App (React Native, Expo, TypeScript, NativeWind, Supabase, RevenueCat)
Consumer skincare app with camera-based vision analysis and an LLM recommendation engine. 39+ screens, subscription billing, and a Supabase Edge Function backend. Live on the App Store.

Synvora — Launch Website (Next.js 14, Tailwind, GSAP, Lenis, Framer Motion, Supabase) — synvoraskin.com
Cinematic marketing site with an SVG stroke-draw brand intro and a referral-position waitlist backed by Supabase. Built to a full SEO spec covering the Next.js Metadata API, JSON-LD structured data and Core Web Vitals.

Oriton Brace — Business Website (Next.js, Claude Code)
Client website rebuilt from a Wix template into a custom codebase.
